

Appln. No. 0925,867
Filed: August 9, 2001

PATENT
Attorney Docket No. 71860

code and the trained transmitter rolling type access code; and a device for providing a barrier movement in response to access codes received by the receiver.

The barrier movement operator provides a method of learning valid security codes by a security code receiver comprising the steps of receiving a first security code, then within a predetermined period of time receiving a second security code, having a predetermined relationship to the first security code; and storing a representation of the second security code as a valid security code.

REMARKS

The above amendment adds a brief Abstract of the technical disclosure in the specification, according to 37 CFR §1.72 and is submitted in response to the request for such an Abstract set forth in the Notice to File Missing Parts. Support for the language of the Abstract, if needed, can be found on page 2: lines 22-26 and page 3: line 36 through page 4: line 11.

Applicants respectfully request entry of the instant Amendment, and submit that no new matter has been added.

The Commissioner is hereby authorized to charge any additional fees which may be required with respect to this communication or credit any overpayment to Deposit Account No. 06-1135.

Respectfully submitted,
FITCH, EVEN, TABIN & FLANNERY
